TECHNICAL SKILLS

LANGUAGES

JavaScript, TypeScript

FRONTEND

React, Next.js, Tailwind CSS, Styled Comp., Framer Motion

BACKEND

Node.js, Express, REST API, JWT, Zod

DATABASES

MongoDB, Mongoose, PostgreSQL, Prisma

TESTING & TOOLS

Jest, Vitest, Supertest, Git, Postman

ARCHITECTURE

Layered Arch., MVC, RESTful, Clean Code

LANGUAGES

Arabic	Native
French	Professional
English	Professional

EDUCATION

Self-Taught Developer

Focused on real-world engineering practices, system design, and building maintainable business applications end to end.

PROFESSIONAL SUMMARY

Product Engineer building systems that survive real constraints. I build systems from real operational problems — inventory, pricing, reporting, and internal tools — focusing on clarity, reliability, and long-term evolution. My work starts with diagnosis: what breaks, what is duplicated, where data loses meaning, and which decisions should become system rules. This portfolio shows how I think in public — through case studies, trade-offs, and implementation details — not just finished interfaces.

PROJECTS

Electro Abidin eSystem

2025 · DEPLOYED

Case Study ↗ *Private repo — demo on request*

Full retail operations system replacing manual stock checks, paper tracking, and slow checkout for a real electronics store.

- Built FIFO batch costing for accurate profit reporting based on real purchase prices
- Connected stock visibility directly to checkout — sales staff verify availability in real time
- Separated workflow state from financial truth via dual-write pattern (Sale + SalesTransactionItem)
- Delivered invoicing (FACTURE / BON DE VENTE), VAT handling, returns, and warranty tracking

Next.js, React, JavaScript, MongoDB, Mongoose, Styled Comp., Zod, JWT, Jest

Elmoussaaif Abdelghafour Brand

2025 · PRODUCTION

Case Study ↗ *Client-owned repo*

Personal brand website built and delivered for a client — live in production. Full ownership of architecture, CMS, authentication, and deployment.

- Designed CMS with drag-and-drop ordering, image optimization (Cloudinary + Sharp), and admin dashboard
- Built JWT + bcrypt authentication with role-based access control
- Implemented multilingual content management and structured SEO metadata for discoverability

Next.js 16, TypeScript, MongoDB, Tailwind 4, Framer Motion, Cloudinary, Zod

MediTrans Core

2025 · IN DEVELOPMENT

GitHub ↗

SaaS platform for medical transport and home care operations in Morocco. Phase 1 foundations complete, active development.

- Designed modular architecture with service, repository, and schema boundaries per domain
- Built deterministic 7-step pricing engine with immutable snapshot persistence
- Vitest test coverage for pricing, invoicing, and payment modules

Next.js 14, TypeScript, PostgreSQL, Prisma 5, Zod, NextAuth, Vitest
